

Spring Semester, 2010

Com S 108

Applied Computer Programming II

Visual Basic online course

Com S 108 (Applied Computer Programming II) is an online Visual Basic course with prerequisite Com S 107.

This online course primarily focuses on practical **Object-Oriented** and **Event-Driven** Programming to develop Windows applications. These applications are useful for either entertainment (gaming), online business or general windows platform programming purposes. In this course, step-by-step guidance will be provided covering basic through advanced concepts by means of programming exercises. We will create Windows applications, such as simple computer games, using **Visual Basic**, **SQL Database** and **Visual Web Developer**.

You will be more creative with Visual Basic!
