The defense will be a summary of my graduate study and introduction of my creative component, including application development process and experiment based on the application.

iOS have a big user group. It has stronger system control and more strict resources access policy than Android. After our program implementation and experiment, we know deeply understand these two major operating systems more. This is a further step for exploring how ADL recognition system can be used by more people. Also, my research will provide a lot of Apple developer policies for letting the next person who will do the same job more easily.
